VeriShip Parcel Accountability provides you with 3D expertise: Data, Diagnosis, and Design. Our 3D approach not only recovers the money you're owed but also helps you streamline processes and optimize parcel spend to save even more.

Data

Objective decisions require objective data, and with VeriShip, that's where it all starts. We connect our trusted and proven cloud-based software to your parcel accounts in minutes, importing your electronic invoices from your carrier and extracting critical data to help identify savings opportunities. With this data in hand, you're able to make objective decisions about your parcel shipping costs—and we're able to request refunds to recoup those costs.

Diagnosis

Data is good, but ongoing analysis is better. Likewise, while data can present you with a snapshot view of your savings opportunities and request refunds accordingly, Diagnosis analyzes new information on a continuous (rather than one-shot) basis to uncover cost trends that will improve your overall parcel health. Through Diagnosis, we make use of critical parcel data gained from more than 3,300 clients to change overall outcomes that affect your bottom line.

Powered by our VeriShip Intelligence Platform™ (VIP), Diagnosis offers access to billions of data touch points that offer greater insights into parcel savings opportunities and common carrier mistakes. Our comprehensive analytics platform gives you access to real time analytics like cost per pound, average zone, and more—all without intrusion to your shipping processes and carrier interactions.

Design

It's one thing to recover parcel dollars lost. It's another thing entirely to uncover new opportunities to save money. The combined power of our proprietary software and 10 years of benchmarking data from more than 3,300 clients helps us to design new cost-savings opportunities for your parcel spend. Our data scientists analyze your parcel spend with objective, real-time benchmarking, so you get actionable intelligence customized to your unique parcel environment.

Design is a cost-saving parcel analytical service built to ensure that all processes related to shipping are managed and executed as efficiently as possible, saving you money. On average, our clients save 10% to 30% of their annual parcel spend through Design.
