THE 2020-21

H O T

COMPANIES

Since 1963, Caljan has specialized in helping parcel carriers, retailers, and manufacturers around the world handle loose cargo efficiently. Using highly engineered logistics automation technology, we optimize the supply chain. Throughput is increased, cost is reduced, and the work environment is safer and more ergonomic.

Operating at a global level with multiple production facilities and an international organization, our customer approach is individual. Telescopic Conveyors, Print & Apply Solutions and Automatic Document Handling Systems are configured and custom-built to match the specific requirements of each application. Our strong economy supports continued growth. Stage gate project management means we can successfully handle orders with larger volumes, an increased customer base, and comprehensive, turn-key projects. Working as a team, we deliver on customer expectations. Enquiries are handled efficiently and orders are executed accurately and timely — all to an exceptionally high quality.

We have a long heritage of innovation, driving changes within the global logistics market. Caljan was first to introduce safety features on unloading equipment, protecting our customers' employees, investment, and cargo. We were also first to introduce alternative Telescopic Conveyor models and the first to develop automated loading and document handling processes. Key technologies are protected by patents.
