

Leading the New Era of Dimensioning

At Rice Lake Weighing Systems, we develop and manufacture dimensioning solutions for every shipping need — from flats and poly bags, to pallets and LTL freight. Our expertise in designing solutions for the shipping and logistics industry is built on our steadfast history as a weighing and measurement manufacturer. Our committed growth allowed us to become leading innovators in emerging technology, including dimensional measurement.

Dimensioning is essential to companies — especially those transitioning from manual, time-consuming processes to modern, streamlined ones. To meet that need, we developed the iDimension® Series of dimensioners to capture dimensional data for virtually all shipping environments.

Innovative Dimensioning Technology

Rice Lake has created the fastest static parcel and pallet dimensioning technology available. Our iDimension systems are certified for accuracy, are simple to use, and engineered with innovative features to make shipping teams more productive.

Our dimensioning technology goes beyond market expectations.

- ▶ Instant scans of any shape. Parcels are dimensioned faster and more accurately than other solutions, all without the risk of human error. In as little as the industry-leading 0.2 seconds, parcels are automatically calculated.
- ▶ Certified accuracy. With models calculating at just 0.2 inches, our iDimension Series ensures precision. Our Legal for Trade models provide the certified accuracy needed to meet strict regulations.
- ▶ Complete data capture. Our patented designs use the latest in sensor, camera, and dimension capturing technology to assure exact dimensional weight measurements and package data.
- ▶ Simple interfacing and peripheral support. Our touchscreen displays allow an intuitive user experience, and iDimension software integrates the dimensioner with scales, barcode scanners, PCs, and more — streamlining warehouse operations.

Rice Lake is a family-owned, ISO 9001 certified corporation, and has been manufacturing and distributing weight and measurement products since 1946.
